SUMMARY

Senior Software Developer with 5+ years of experience taking products from 0 to 1 and scaling them beyond. Proven track record of architecting and delivering complex web platforms end-to-end, modernising legacy systems, and driving frontend strategy. Known for ownership, strong stakeholder alignment, and shipping high-impact software under pressure.

EXPERIENCE

Future Clinic (YC F24)

July 2026 - Present

Senior Product Engineer

- Contributed to core platform infrastructure at a YC-backed healthcare AI startup building the future of digital-first clinical care, serving patients across chat and voice-based interfaces at scale.
- Elevated engineering standards across the team by embedding AI-native development practices, implementing a structured testing pyramid (unit, integration, E2E), and mentoring junior and mid-level developers, improving release confidence and reducing bug rates in a fast-moving startup environment.

Global Relay

Senior Software Developer

Jul 2024 - Present

Intermediate Software Developer II

Jan 2023 - Jul 2024

Intermediate Software Developer I

Jan 2022 - Dec 2022

- Recognised for leading the design and development of a Website Archive portal, enabling replay of archived websites, side-by-side content comparison, and automated audit report generation.
- Enabled product owners to independently deliver client-facing interfaces using a JSON Forms powered drag-and-drop builder, removing engineering bottlenecks and accelerating time-to-market for new services from months to weeks.
- Led migration of legacy decade-old codebase to React, boosting developer velocity.
- Designed and implemented micro-frontend architecture, enabling parallel team development and long-term scalability.
- Built and evolved the company Design System, driving UI consistency across products and cutting duplicated component work across teams.
- Led feature delivery end-to-end, from scoping and feasibility through to production, collaborating with product and design to move fast without sacrificing quality.

Global Relay

- Defined and championed the frontend testing strategy, partnering with QA to increase release confidence and reduce regression incidents.
- Established coding standards and led regular knowledge-sharing sessions, raising the technical bar and creating a more consistent engineering culture.
- Shaped frontend hiring processes and onboarded/mentored junior developers, accelerating team ramp-up and improving code quality.
- Conducted user research with compliance teams, translating feedback into product decisions that improved usability and adoption.

Epicode

Oct 2021 - Jan 2022

Software Engineer

- Mentored and taught coding skills to students, fostering their development in programming languages and software development.
- Designed and delivered engaging coding tutorials and projects, enhancing students' understanding and application of coding concepts.

SKILLS

Frontend	React, Redux, React Query, Next.js, Javascript, Typescript, HTML, CSS, SCSS, Tailwind, Vite, Microfrontends
Backend & Tooling	Node.js, ExpressJS, MongoDB, PostgreSQL, Rest APIs, Websockets, Webpack, Vite
Testing	Jest, Vitest, React Testing Library, Cypress, Playwright, TDD/BDD
DevOps & Collaboration	Git, Github, CI/CD, Jenkins, Docker, Kubernetes, Design Systems, Storybook, Figma
AI & Developer Tooling	Claude Code, OpenAI Codex, Agentic Workflows, Prompt Engineering, LLM-assisted development, AI integrations

EDUCATION

Epicode	Mar - Oct 2021
Fullstack Web Development Programme	
Harvard University	Mar 2021
CS50, Introduction to Computer Science	
Westminster City Boys School	2009 - 2016
A Levels: Further Maths, Maths, Economics
